

Mahmoud Ahmed

Front End Web Developer

Career summary

A problem solver, I'm a junior but I can work on my own, complex problems don't intimidate me; overview is my thing and self-study as well. I'm precise in everything I do, always taking time into account. I'm eager to learn from anyone who is more experience than or even less but has something I don't know about. I'm open to learn things I'm not comfortable with; new language, new technology. I'm pursuing a software engineer career.
